

MEASURE YOUR WINDOWS

The [SHADE SIZING CHART](#) is a helpful tool

Measure the exact size of the window glass - Width & Length
Example: If glass size is 5" W x 30" L - Actual finished shade size should be 8" W x 36" L

Normally: Nightlock adds 3" to the width & 6" to the length, to ensure best coverage to block the view.

They are designed with a 2" Velcro adhesive strip at the top and should hang 4" lower than the bottom of the window .

We have 13 standard sizes to choose from, and custom built sizes.

NOTE ANY OBSTRUCTIONS

While measuring windows for correct sizing, note any obstructions that may interfere with the shade operation.

If less than 2" of space at the top.
(Nightlock has a special solution to correct this problem)

If a push bar is too close to the window, the shade must be positioned or custom sized to fit above the push bar to avoid a gap at the bottom.
