

Nightlock Lockdown Safety Shade - *Bridge Installation*

For use when Velcro Hook surface is less than 2"

Peel backing and securely adhere to Door, See Above

Wait 24 Hours before attaching the Lockdown Safety Shade.

When measuring your door windows for Nightlock Lockdown Safety Shades there should be 2" of clear surface above the window to attach the Velcro Hook.

A door closer or other obstacle may be present.

If there is not 2" of clear space, you will need a bridge.

The Nightlock bridge is 2" tall and 4" wider than your window pane, so measure the window pane opening and add 4" to the shade width and 6" to the length.

If there is a crash bar door latch, length should end just above the crash bar.
